

AA_052026.hdf5 SAXS data overview

Summary:

Data name(s): AA_052026.hdf5

SAXS data summary figure for AA_052026.hdf5. Series intensity (blue, left axis) vs. frame, and, if available, Rg vs. frame (red, right axis). Green shaded regions are buffer regions, purple shaded regions are sample regions.

Experimental parameters:

	AA_052026.hdf5
q-measurement range	0.005 to 3.19

Series:

	AA_052026.hdf5
Baseline correction	Linear
Baseline start range	0 to 10
Baseline end range	439 to 449

EFA results:

	AA_052026.hdf5
EFA data range	117 to 250
Number of components	3
Component 0	160 to 222
Component 1	168 to 197
Component 2	168 to 222

EFA deconvolution results. a) The full series intensity (blue), the selected intensity range for EFA (black), and (if available) Rg values (red). b) The selected intensity range for EFA (black), and the individual component ranges for deconvolution, with component range 0 starting at the top left, and component number increasing in descending order to the right. c) Mean χ^2 values between the fit of the EFA deconvolution and the original data. d) Area normalized concentration profiles for each component. Colors match the component range colors in b. e) Deconvolved scattering profiles. Colors match the component range colors in b and the concentration range colors in d.
